RE: The Real Cause Of Breast Cancer

FK:

Word Count:

Dear Neymar,

Over the last few decades breast cancer awareness and fundraising have risen drastically.

I'm sure most people believe were making real progress, but we haven't.

This past December World Health Organization's released new cancer data that that revealed breast cancer rates rose 20% from 2008 to 2012.¹

Why do breast cancer rates continue to rise despite an increase in awareness and fundraising?

The mainstream is barking up the wrong tree when it comes to breast cancer.

Take the Susan G Kolman Foundation is for example. They're one of the most visible charities in the world, who's responsible for pink ribbons and the pink integration of corporate America.

According to the New York Times, they raised \$472 million dollars in 2011. You know what they did with it? A measly 16% went to research. The rest went to education, and screenings.²

The Kolman foundation have always advocated for mammograms, and screenings. That's where your donations go, and it's a waste. More than thirty years of research proves mammograms and screenings don't stop breast cancer.

The New England Journal of Medicine examined trends from 1976 through 2008 of early-stage breast cancer and late-stage breast cancer among women 40 or older. The whole point of the study was to look at the effect mammograms had on breast cancer.

They found over the years cases of early stage breast cancer have greatly increased, but the rates of advanced breast cancer only saw a tiny reduction.³

Mammograms aren't catching more cases of breast cancer. If they were, you'd see a bigger reduction in advanced cases. Instead, it's causing a lot of over-diagnosis.

You know what the mainstream should be researching and talking about instead?

A discovery, almost no one is talking about, that I made years ago.

There is a troubling epidemic sweeping across America that has directly led to the rise in breast cancer, ovarian cancer, endometrial cancer, cervical cancer and prostate cancer too.

It's the rise of estrogen.

At higher levels, estrogen is a known cancer-causing agent. It acts like radiation, producing extremely destructive free radicals, and causes your DNA to "misfire" and produce the defects that are the beginnings of cancer. After certain estrogens break down, the quinines produced can also cause DNA errors.⁴

Estrogen also decreases one of your body's most powerful antioxidants, glutathione. This also increases oxidative DNA damage in estrogen-responsive tissues, when the organism is simultaneously exposed to ... you guessed it, xenoestrogens. This is another early step in the process of cancer formation (carcinogenesis).⁵

Women are the largest consumers of cosmetic products, which may be a significant source of xenoestrogens. Some, such as metalloestrogens (like the aluminum salts in anti-perspirants), and estrogen-mimicking chemicals.

The best way to protect yourself is to return estrogen levels in your body to healthy levels, and I recommend getting plenty of DIM (Diindolylmethane) to do it. DIM is a 100-percent-natural nutrient that's found in cruciferous vegetables like broccoli, kale and cauliflower.

Try to eat them daily, because DIM can cleanse your system of excess estrogen. For supplementing, I usually start patients with a 100 mg DIM capsule. Two capsules can provide the DIM equivalent to a pound of vegetables.

There is so much more I want to tell you right now but I can't. Not here.

Our lawyers have said saying anymore is too "high risk." I could be investigated, prosecuted, fined, shut down and even put in jail by the FDA. Turns out the FDA doesn't recognize the problem of "estrogen dominance."

And, I would need clinical trials to tell you how to deal with it. It explains why so few people know they have excess estrogen problems. Plus if we need drug trials as a solution for any health problem, then only drug treatments can solve our problems. Now who does that benefit?

That's one of the ways the FDA "services" their corporate clients – pharmaceutical companies.

Meanwhile I can't call anything a health problem if I'm going to offer a natural solution for it.

But there is one place I can speak freely, my *Confidential Cures* newsletter.

See, the First Amendment of the U.S. Constitution protects *Confidential Cures*. The FDA can't regulate what I say there so I can talk about issues, and natural cures they're trying to sweep under the rug.

Now, I'd like to invite you to become a *Confidential Cures* member today so I can share these issues and natural cures with you completely uncensored.

I'd also like to give you a gift for joining today, my newest report "XYZ".

In this report I share everything I can't say here about breast cancer and estrogen. You'll learn about one of the most devious and fastest-growing sources of excess estrogen and the two most effective ways to remove dangerous excess estrogen from your body. Plus much more.

Join *Confidential Cures* today to claim your free report!

To your good health,

{SIGNATURE}
